

## Operating panel

### Setting the Temperature

Ensure cooler is on.

Press “SET” button 1 time and then press the “+” or “-” buttons to select the cooling temperature. Set your cooler to 34°F or 2°C. If you go lower than that you may freeze your food.

The cooling temperature appears in the display for a few seconds. The display flashes several times and then the current temperature is displayed again.

### Setting Temperature Mode (Recommended)

To set the cooler to LOW (recommended) Press the set button 3 times and then press the “+” or “-” buttons to select “LO.”

The selected mode then appears in the display for a few seconds. The display flashes several times before it returns to the current temperature.

### Setting the Temperature Units

Press the “SET” button 2 times and then press the “+” or “-” buttons to select Celsius or Fahrenheit. The selected temperature units appear in the display for a few seconds. The display flashes several times and then the current temperature is displayed again.
