

## Shadyboy Awning Instructions

The Shadyboy Awning is easy to set up anytime you like. Here is a simple step-by-step instruction guide. It takes just a few minutes to set up, so go ahead and use it!

- Open the Shadyboy awning case
- Start by inserting the blue rods into each end of the steel body case - holes #1. Then snag the fabric around the end of the poles.
- The yellow rod with the yellow cap goes into the centre of the awning body - hole #2. Then you snag the middle of the awning fabric around the end of this pole.
- Join the green rods together. Place these rods into holes #3 on the side of the awning body. Bend the rods and attach to the corner of the awning fabric.
- The ropes attach to the corners of the green poles and then anywhere on the vehicle in order to give the awning more stability. (Optional.)
- There are poles which are orange in colour. These are the optional downdraft poles that connect to the end of the awning using the clips provided. The poles themselves have a little steel ring used to keep them together.

### **WARNING**

**High winds can tear the awning. Please don't use awning in high winds!**

**Make sure you don't lose the poles. It will be your responsibility to replace them (and they are expensive).**

**Don't drive with the awning out.**

Have fun and drink a cold one under the shade of the awning for us.

Cheers - Lost Campers Crew
